Pr – Products Table v1.9

January 2018

General changes

Throughout the last three months, we have been working with the track and communications departments at Transport for London. As a result, many track codes have been added and revised to match the requirements of the track engineers. Similarly, new communications codes have been added for CCTV installations for both surveillance and train management, as have new codes for public address products. In addition, we have added new codes for products requested by other users. We have also amended and deleted codes that are duplications of codes elsewhere in the tables. Please see the full details below.
